 DATASHEET

## SAGE INTACCT FOR HOTELS & HOSPITALITY

**Automate your financial processes, gain more insight, and make confident decisions that will boost profitability.**

Hoteliers are under constant pressure to deliver unique and exceptional guest experiences. With reams of guest information often siloed across a spider web of back office systems, hotel finance teams can be left hunting data through complex processes that reduce productivity and impact decision-making capabilities.

Whether you operate multi-property hotels, boutique B&B's, hostels, campsites, or luxury resorts, Sage Intacct provides a powerful chart of accounts, specially configured by us, using the Universal System of Accounts for the Lodging Industry (USALI). It enables you to automate processes across multiple operations and locations, streamlining and accelerating your entire finance function.

*Sage Intacct provides a flexible digital backbone that can deliver reporting and management accounts in seconds. Tailored to the roles and goals of all relevant stakeholders, from the CEO and shareholders to GMs and business unit leaders, we now have a single version of the truth, with no margin for subjectivity and a consistent view of the business from which to propel it forward.*

# MUST HAVE FINANCE FEATURES

## USALI

Utilising the most relevant aspects of USALI, we've optimised our Sage Intacct solutions to facilitate best practice and provide a standardised means of accounting, across the industry. Not only does this consistent way of accounting across every property underpin best practices, reduce risk, and facilitate productivity, the use of clear steps, templates and reports mean that FDs and accounting personnel can immediately pick up and run with accounting functions at new properties, whether it's a newly acquired hotel or a new role.

## DASHBOARDS & REPORTING

Financial management software for hotels needs to have industry-specific functionality. This includes strong reporting tools that are essential in showing hotel occupancy rates, daily rates, and seasonal trends. Sage Intacct's role-based dashboards feature visuals of critical metrics and accounting information to enable both financial and non-financial users, to easily acquire the answers they need at just a glance.

## ADVANCED INSIGHTS

No matter how complex your business structure Sage Intacct will track real-time performance centrally across all of your locations. You can view accounting and finance information by location, groups of locations, concepts, regions or other categories, and automate a complete range of customised reports while also managing consolidations from a parent company.

## DEEP INTEGRATION

Hotel chains with multiple business units need to see their data in a simple and standardised manner. Sage Intacct provides deep integration into third-party hotel management systems as standard. So you can gather, display and analyse all the unique data that drives your business in one unified report. Enabling you to spend less time inputting and searching for data and more time focussing on customers. And because it's cloud-based, you don't have to worry about complicated or expensive upgrades, all your users have the latest finance technology at their fingertips, at the same time.

# SAGE INTACCT CAPABILITIES

## FINANCE MADE SIMPLE

Your finance software requires industry-specific functionality. This includes strong reporting capabilities to highlight areas that are generating the most revenue and services which may no longer be profitable.

Sage Intacct offers a wide range of accounting capabilities, in a modular format that gives each department within your organisation the flexibility to choose the best software applications for its needs.
